

ONETUNE FUTURISTIC UI + SYSTEM UPGRADE

You are upgrading my existing OneTune music streaming platform into a futuristic premium glass operating-system-style experience inspired by:

- Apple Music
- VisionOS
- iOS 26 concepts
- futuristic floating system interfaces

The final result MUST feel like: “a futuristic music operating system” NOT a normal website.

IMPORTANT

I uploaded multiple ZIP projects/APIs.

Analyze ALL uploaded files carefully first.

Then:

1. Identify the BEST frontend architecture
 2. Identify the BEST streaming/music API
 3. Merge the strongest parts only
 4. Remove unnecessary duplicate systems
 5. Keep project optimized and scalable
 6. Do NOT break existing working functionality
 7. Preserve deployment compatibility
-

BEST SYSTEM CHOICE

Use:

Frontend Base:

- musichub-master

Primary Streaming API:

- music-api-main

Secondary Metadata/Fallback:

- MusicAPI-master

Avoid using:

- NET-MusicAPI-main as core backend
- unnecessary duplicate APIs

TECH STACK

Frontend:

- Next.js 14 App Router
- TailwindCSS
- TypeScript
- Framer Motion
- React Spring
- Zustand
- React Query

Backend:

- Next.js API routes
- Node.js

Database/Auth:

- Supabase

Deployment:

- Vercel-ready
 - GitHub-ready
 - Mobile responsive
 - PWA ready
-

NEW DESIGN SYSTEM

COLORS

Main Background:

222222

Primary Accent:

ff006b

Secondary Accent:

ff390d

Glow Style: Neon pink/orange ambient lighting.

NO blue color system anymore.

VISUAL STYLE

Inspired by:

- VisionOS
- Apple Music
- futuristic glass operating systems

Requirements:

- floating UI
- layered depth
- translucent blur cards
- liquid glass effect
- ultra smooth animations
- premium cinematic feel
- glowing ambient backgrounds
- adaptive gradients

- soft reflections

NO flat UI.

Everything must feel alive and floating.

GLASS SYSTEM

Create reusable glass UI components:

- GlassCard
- GlassPanel
- FloatingDock
- GlassModal
- GlassSidebar
- GlassButton

Glass Style:

- backdrop blur
 - saturation boost
 - soft transparency
 - neon reflections
 - depth shadows
 - rounded 24px+ corners
-

HOME SCREEN REDESIGN

Create:

1. Hero Glass Section
2. giant floating hero panel
3. animated ambient background
4. featured music spotlight
5. Trending Section
6. floating depth grid

7. hover tilt effect
8. animated glow
9. 3D Carousel
10. Apple-style horizontal scroll
11. depth scaling
12. smooth snapping
13. Dynamic Background Engine
14. moving blur orbs
15. mesh gradients
16. ambient lighting
17. reactive glow layers

PLAYER REDESIGN

Redesign player completely.

Collapsed Player:

- floating bottom pill
- ultra glass style
- glowing progress bar
- animated waveform

Expanded Player:

- fullscreen modal
- blurred immersive background
- adaptive colors from album art
- live visualizer
- holographic vinyl animation
- animated lyrics support
- swipe gestures

Add:

- smooth expand/collapse physics

- spring animations
 - elastic movement
-

MOBILE EXPERIENCE

Must feel like a native iPhone app.

Add:

- floating bottom navigation
 - swipe gestures
 - momentum scrolling
 - spring transitions
 - bottom sheet modals
 - haptic-like motion timing
 - smooth overscroll behavior
-

ANIMATION SYSTEM

Use:

- Framer Motion
- React Spring

Animations:

- physics-based motion
- liquid transitions
- hover magnetic effects
- parallax scrolling
- smooth route transitions
- floating animations
- depth movement

IMPORTANT: Animations must remain smooth on mobile devices.

Optimize performance carefully.

AUDIO FEATURES

Add:

- gapless playback
 - crossfade
 - volume normalization
 - audio quality selector
 - waveform visualizer
 - adaptive player glow
 - Media Session API support
-

PWA FEATURES

Implement:

- installable app
 - offline caching
 - background playback
 - mobile app experience
 - lockscreen controls
-

PERFORMANCE RULES

IMPORTANT:

Backdrop blur and animations must NOT reduce FPS heavily.

Optimize using:

- GPU transforms
- opacity/transform animations only
- lazy loading
- virtualization
- optimized motion
- reduced re-renders

Avoid:

- excessive nested blur layers
 - expensive shadows
 - unnecessary rerenders
-

PROJECT STRUCTURE

Create clean scalable architecture:

/components /ui /player /glass /layout /animations

/lib /api /audio /theme

/store /hooks /styles

ADDITIONAL REQUIREMENTS

- Dark mode optimized
 - Responsive on every screen size
 - Retina-quality visuals
 - SEO optimized
 - Accessibility friendly
 - Type-safe architecture
 - Clean reusable component system
-

FINAL GOAL

OneTune should feel like:

“Apple Music + VisionOS + futuristic glass OS + premium streaming platform”

NOT:

- a template
- a dashboard

- a basic Spotify clone

The final experience must feel:

- cinematic
- immersive
- futuristic
- premium
- floating
- reactive
- system-level

IMPORTANT WORKFLOW

1. First analyze all uploaded ZIP projects
2. Decide best architecture
3. Merge strongest systems
4. Upgrade UI system
5. Optimize performance
6. Ensure Vercel deployment works correctly
7. Ensure production-ready structure

After analysis:

- explain chosen architecture
- explain merged systems
- explain removed systems
- then begin implementation
